PROFILE

Full-stack developer based in Egypt. I build end-to-end web products: responsive Next.js / React interfaces on the frontend, and typed Node.js APIs (NestJS and Express) on the backend. Recent work covers authentication, e-commerce flows, real-time notifications, file uploads, MongoDB, Redis, and Docker.

SKILLS

Frontend

HTML CSS Tailwind CSS JavaScript TypeScript React Next.js Redux Bootstrap
React Hook Form Zod TanStack Query

Backend

Node.js NestJS Express REST APIs MongoDB Mongoose Redis JWT Socket.IO
Zod / class-validator

Tools & cloud

Git / GitHub Docker AWS S3 Vercel Firebase Nodemailer Postman

FRONTEND PROJECTS

FRONTEND E-Commerce App

[Next.js](#) · [TypeScript](#) · [Tailwind CSS](#) · [NextAuth](#) · [Zod](#) · [Axios](#)

- Storefront with products, categories, brands, cart, wishlist, addresses, and checkout.
- Auth (login / register), form validation with React Hook Form + Zod, and JWT session handling.
- Online payment flow, order history, and a deployed production build on Vercel.

[Live demo](#) | [GitHub](#)

FRONTEND Meals App

[Next.js](#) · [TypeScript](#) · [Tailwind CSS](#) · [TanStack Query](#) · [Axios](#)

- Recipe explorer that lists meals by category, area, and main ingredient.
- Search by name or first letter, random meal discovery, and detailed meal pages.
- Server-rendered Next.js pages with a shared navbar and typed API layer.

[GitHub](#)

BACKEND PROJECTS

BACKEND E-Commerce API

NestJS · TypeScript · MongoDB · Redis · Socket.IO · AWS S3 · Docker

- Modular NestJS API for auth, users, products, categories, cart, orders, and notifications.
- JWT auth with role-based guards (user / admin), email OTP, and password reset.
- Order lifecycle with event-driven email + real-time Socket.IO notifications.
- Image uploads to AWS S3 and a Docker Compose stack (API, MongoDB, Redis).

[GitHub](#)

BACKEND Social Media API

Express · TypeScript · MongoDB · Redis · Zod · JWT · Firebase / Google Auth

- REST API for signup, login, email confirmation OTP, password reset, and Google signup.
- Authenticated user profile, profile-picture upload, and token-based logout.
- Post module with attachment uploads, Zod validation middleware, and Redis caching.

[GitHub](#)

HOW I WORK

- I split features into clear frontend and backend layers: typed DTOs/schemas, REST endpoints, and UI flows that match them.
- I use authentication, validation, and role checks as defaults — not add-ons — especially on cart, order, and admin routes.
- I containerize backend services with Docker so MongoDB, Redis, and the API run together locally.

Open to full-stack roles and freelance work

Happy to walk through any of these repos, architecture decisions, or a live demo.
